

2070 Temperature Prediction

吴千里

更新于 09 December, 2021

目录

1	假设 Assumption	2
2	Prediction Interval	3
3	温度预测	4

1 假设 Assumption

1. 鱼群会自己向舒适温度区间游动
2. 鱼群适应的温度范围不会改变

2 Prediction Interval

A prediction interval is a type of confidence interval (CI) used with predictions in regression analysis; it is a range of values that predicts the value of a new observation, based on your existing model.

The formula of prediction interval:

$$\hat{y}_h \pm t_{\frac{\alpha}{2}, n-2} \cdot \sqrt{MSE \left(1 + \frac{1}{n} + \frac{(x_h - \bar{x})^2}{\sum (s_i - \bar{x})^2} \right)}$$

3 温度预测

```
# import data from datafile
datafileCSV <- read.csv("/Users/qianli/Downloads/datafile.csv")
```

```
# 初步处理数据，转化西经为负数，东经为正数
library(dplyr)
data <- datafileCSV
# only need West latitude and North longitude
dataWest <- data %>% filter(grepl("W",Longitude) & grepl("N",Latitude))
dataEast <- data %>% filter(grepl("E",Longitude) & grepl("N",Latitude))
# Convert each column to numeric data
dataWest[,1] <- as.numeric(substr(dataWest[,1], 1, nchar(dataWest[,1])-1))
dataEast[,1] <- as.numeric(substr(dataEast[,1], 1, nchar(dataEast[,1])-1))
dataWest[,2] <- as.numeric(substr(dataWest[,2], 1, nchar(dataWest[,2])-1))
dataEast[,2] <- as.numeric(substr(dataEast[,2], 1, nchar(dataEast[,2])-1))
dataWest[,3] <- as.numeric(substr(dataWest[,3], 5,8))
dataEast[,3] <- as.numeric(substr(dataEast[,3], 5,8))
dataWest[,1] <- -dataWest[,1]
dataTotal <- rbind(dataEast, dataWest)
dataTotal <- na.omit(dataTotal)
```

```
# 设置需要的经纬度范围（可更改）
# Set the bounds of regions here
longitude_lowerbound <- -12
longitude_upperbound <- 10
latitude_lowerbound <- 50
latitude_upperbound <- 80
```

```
# 提取每年平均温度
# Only require data from -12-10E and 50-80N
dataTotal <- dataTotal %>%
  filter(Longitude <= longitude_upperbound &
         Longitude >= longitude_lowerbound &
         Latitude <= latitude_upperbound &
         Latitude >= latitude_lowerbound)
```

```
# 把同地点 1981-2020 的温度数据拷贝一份副本
dataTotal2 <- dataTotal %>% arrange(Longitude, Latitude) %>% group_by(Longitude, Latitude, Time) %>%
# 同地点 1981-2020 的温度数据
```

```
dataTotal <- dataTotal %>% arrange(Longitude, Latitude) %>% group_by(Longitude, Latitude, Time) %>% summarise(
